Citizenship Status: U.S Citizen

Security Clearance: None

EDUCATION

California State University, Northridge, CA

M.S., Software Engineering

May 2026

B.S., Computer Science

May 2023

Relevant Coursework: Adv. Data Structures, Database Design, Adv. Web Design, Software Engineering Management, OO Soft. Design, Machine learning

SKILLS

Software Skills: Java, Python, JavaScript, C++/ C, Kotlin, PHP, C#, SQL,

Framework and Tools: Firebase, Jira, Git, SDLC, Wireshark, Unit Testing, Docker, AWS, Ubuntu, pytest, JUnit, Postman

OS Experience: Windows, Mac OS

EXPERIENCE

Software Development Intern, Treevah (USA Remote)

Jan 2025 - June 2026

- Developed and deployed a scalable, user-centric web application using React.js, Node.js, and JavaScript, Leveraging Azure App Services and Azure Functions to enable real-time data processing and high availability.
- Optimized the system and streamlined the CI/CD workflow by implementing comprehensive regression testing, resulting in a reduction of post-deployment bugs.
- Validated API endpoints and secured JWT-based authentication using Azure B2C, while integrating native Microsoft OneDrive support for seamless file management.
- Architected and implemented a Retrieval-Augmented Generation (RAG) chatbot pipeline utilizing Azure AI Search and Azure AI Foundry, integrating secure file metadata to ensure strict access controls for files and folders.

Student Professional Worker, LADPW (Los Angeles, California)

Nov 2025 - May 2026

- Collecting and analyzing data, contracts, reports, data manipulation, and administering admin roles.
- Scripted a Python program to parse data and do automatic filtering for clean data extraction. (18 Hours per week)

CyberSecurity/IT Intern, LA-Tech.org (Los Angeles, California)

Aug 2023 - Dec 2023

- Collaborated on a System Administration project involving AWS EC2, Ubuntu OS, and VMs, where we implemented Apache2 web servers, configured SSH key-based access, and established identity and authentication controls (usernames, passwords, RDP)
- Gained hands-on experience with cloud infrastructure (IaaS) by launching and configuring virtual machines, setting up basic networking, and troubleshooting server connection issues, command-line errors, and firewall access
- Participated in securing cloud environments by enforcing RSA key pairs, managing limited user access, and implementing VM backup strategies to ensure data protection and recovery.
- Contributed to the setup of a MySQL database by experimenting with user roles, permissions, and table creation; navigated deployment challenges through team-based problem-solving and reviewing AWS documentation.

PROJECTS

Multimedia System Design - Marks Automation Script

May 2023

- Developed an automation script using Python that automates 4 manual positions in seconds. Script reads proprietary data from Baselight and Flame machines to calculate the filesystem locations of frames.
- All requests are stored in a database and can be used for data analysis and to improve worker efficiency. Exports are basic CSV files converted to XLS files that include timecode and thumbnail previews and can be uploaded to Frame.io.

Recipe Craft

May 2024

- Developed an application using Elasticsearch to enable users to search for recipes and ingredients, incorporating multimedia support such as video tutorials.
- Learned databases, scripting, and CI/CD using Bitbucket. Practiced test-driven development (TDD), behavior-driven development (BDD), and agile methodologies to enhance application reliability and team collaboration.

Hotel Web App

December 2024

- Deployed backend using AWS Lambda, API Gateway, and DynamoDB for NoSQL data management.
- Implemented image storage via AWS S3, handled scheduled tasks with AWS EventBridge, and secured endpoints with JWT-based authentication.
- Enabled dynamic room booking, image uploads, and API integrations, enhancing user interaction and system scalability.
